**Subject:** Reimbursement for govt expenses for Gold King release into rivers?

Hi Marty;

Is there a different form or process (other than the standard form 95) that government (state, county, city or tribal) agencies should use for requesting reimbursement for responding to the release into the river systems?

I don't know how much is being requested, but I know DWQ has had field crews sampling and monitoring at up to four different stations spread along SE Utah.

The 95 form I saw on your web site seemed to be more for private land owners seeking compensation for injury/death or property damage. Government costs would be more related to response, mitigation, monitoring, sampling, lab costs, alternative water sources, etc.

Any update would be appreciated.

Thanks!
